

Product Requirements Document: PropWise

Document Owner: SURG Solutions Limited

Project Status: Ideation and Planning

1. Executive Summary

PropWise is a UK property investment intelligence platform designed to help individuals and real estate agencies make smarter property decisions. By combining HM Land Registry sales data, AI powered valuation models, and a proprietary real time news signal engine, PropWise delivers a clear investment verdict for any UK residential property.

2. Product Vision and Strategy

The UK residential property market holds over 8 trillion pounds in assets, yet buyers and agents rely on backward looking tools that ignore live market signals. PropWise bridges the gap between institutional grade analytics and consumer accessibility. The vision is to become the trusted intelligence layer of the UK property market.

3. Target Audience

- **Individual Buyers:** First time buyers, second steppers, and property investors who want confident and evidence based decisions before committing to a purchase.
- **Real Estate Agencies:** Independent estate agents and mid size agency chains seeking to differentiate their listings with data and build buyer trust at the point of sale.

4. Core Features and Functionality

4.1 AI Property Valuation

Users can enter any UK postcode or address to receive an estimated fair value range derived from Land Registry sales data, current listing prices, property characteristics, and local market trends.

4.2 News Signal Layer

A real time engine that ingests and classifies UK news sources, planning portals, and council announcements. It maps stories to their geographic impact and assigns a positive, neutral, or negative signal to properties in the affected area.

4.3 Investment Score

A zero to one hundred score combining location quality, price fairness, infrastructure growth, and rental yield potential. Component scores provide buyers and agents a breakdown they can discuss and interrogate.

4.4 Comparable Sales Explorer

An interactive map of recent sales within a configurable radius, filterable by property type, bed count, and date. This allows users to see exactly what similar properties actually sold for.

4.5 Shareable Agency Reports

Agencies on a paid plan can generate branded PDF format valuation reports for any property in their listings, complete with the investment score, news signals, and a plain English summary.

5. Data Sources Architecture

PropWise relies on a robust stack of open government data and commercial APIs to maintain a defensible and low cost data foundation.

Data Source	Data Category	Application in Model
HM Land Registry	Complete UK property sales history	The backbone of the comparable sales engine, providing historical sales context.
ONS House Price Index	Regional price trends	Tracking affordability data and broader regional economic trends.
Planning Portal	Development applications	Identifying infrastructure announcements and planning permissions that impact future value.
NewsAPI and Diffbot	Real time UK news ingestion	AI classification layer maps stories to postcodes and assigns sentiment scores.
Environment Agency	Flood risk data	Assessing geographic risk profiles by postcode.
Ofsted	School ratings	Tracking educational quality shifts that influence family buyer demand.

6. Success Metrics

- **Prediction Accuracy:** Targeting an accuracy within 5 percent for standard residential properties compared to actual sale prices.
- **User Conversion:** Moving free plan users to paid Buyer plans when they find a property they are serious about.

- **Agency Adoption:** Successfully onboarding pilot agencies and converting them to the paid Agency Pro tier.
